OPTICAL CENTER PUNCH

SETS

DIRECTIONS:

Our optical center punch is a highly accurate method of aligning the intersecting points of scribed line for layout and drill hole patterns quickly and easily. Easy to use, just align the base with the optical centered on the spot which a small indentation is required, replace the optical punch with the hardened steel punch and strike gently with a hammer.

SET CONTAINS:

Precision guide base with scratch protection. Two spotting lenses: one with center dot and circle, and one with cross-hair for easily lining up the punch as close as ±.001". 60° and 120° center punches made of hardened tool steel. Punch Dia 3/8".

AUTOMATIC CENTER PUNCH:

It performs the same function as an ordinary center punch but without the need for a hammer. When pressed against the workpiece, it stores energy in a spring,
